

ChoicePoint for PeopleSoft

Full range of pre-employment screening solutions.

Optimize employment screening.

A PeopleSoft certified software integration.

Company Overview

For almost a century, ChoicePoint has been a trusted source and leading provider of decision-making information that helps reduce fraud and mitigate risk.

ChoicePoint has grown from the nation's premier source of data for the insurance industry to one of the premier providers of decision-making intelligence to businesses and government. ChoicePoint offers a full range of employment screening solutions including background investigations and drug-free workplace programs. ChoicePoint has been providing employment-screening services to businesses and government since the 1940s.

Integration Overview and Benefits

Several ChoicePoint customers who implement PeopleSoft Enterprise HRMS want to integrate ChoicePoint's background screening services into the PeopleSoft application. Specifically, this integration enables customers to:

- Launch a background check for a particular candidate from within PeopleSoft.
- View status of the background check for a particular candidate.
- Launch the background-screening portal from within PeopleSoft so a recruiter/manager can view more detailed functionalities specific to background screening services.

Integration Methodology and Technology

When a user requests a pre-employment check, PeopleSoft maps company and applicant information into an XML file and posts it to ChoicePoint. ChoicePoint then sends an XML response containing authentication status and a URL back to PeopleSoft. If successful, PeopleSoft will redirect the user to the URL supplied in the response by ChoicePoint. When the user has saved or submitted the pre-employment request, ChoicePoint will post an XML request containing pre-employment inquiry summary status to PeopleSoft. PeopleSoft will insert or update the appropriate records based on this information.

When a user views pre-employment request results, PeopleSoft maps company and applicant information into an XML file and posts it to ChoicePoint. ChoicePoint then sends an XML response containing authentication status and a URL back to PeopleSoft. If successful, PeopleSoft will redirect the user to the URL supplied in the response by ChoicePoint. The user may choose to return to PeopleSoft by clicking on a return hyperlink on the ChoicePoint site.

Availability

Application Server /OS: BEA Tuxedo 6.5 / Windows 2000 Server SP4

Database Server / OS: Oracle RDBMS Server 9.2.0.4 / Solaris 9

PeopleSoft Certified Software Integrations

When PeopleSoft conducts certification testing, we verify only that the software integration functions according to the partner's test plan, and that it makes appropriate use of PeopleSoft components and integration technologies in the environment specified in the published Certification Datasheet. Certification applies

only to the components providing integration between the partner's software and PeopleSoft software; it does not apply to or extend to the partner's software product(s). Certification is performed in a lab environment using uncus-tomized versions of PeopleSoft and the partner's software. Certification testing is product version specific, hardware specific, database specific, and operating system specific, and is conducted in English, unless explicitly noted otherwise. Similar results may not be able to be duplicated in a production environment, including where the PeopleSoft or partner software is modified or customized upon implementation. Customers are solely responsible for the selection of all third-party software, including any integration software, used in conjunction with PeopleSoft software and for the results of such use. For the functional and environmental details on the certified integration, refer to the Certification Environment section of the Certification Datasheet. A list of all PeopleSoft partner Certification Datasheets can be found in the Partner section of the PeopleSoft web site at www.peoplesoft.com.
