

enRole 4 Agent for PeopleTools 7.55

A PeopleSoft 7.5 certified software integration.

Policy-based provisioning, workflow, and auditing capabilities.

Enhanced enterprise security with identify feed to PeopleTools 7.55.

Introduction:

Access360 provides policy-based provisioning solutions that automate the process of granting employees, contractors, and business partners access rights to the IT resources they need, whether inside or outside the corporate firewall. With Access360, companies can react instantaneously to changing business environments and relationships and operate with confidence, whether in a closed enterprise environment or across a virtual or extended enterprise.

Access360

Access360 is headquartered in Irvine, California, U.S.A. and has offices throughout the United States and Europe. Access360 is a privately held company with leading international investors. Customers include national and global corporations. The company's flagship offerings, enRole and Access360.net powered by VeriSign, ensure the right people have access to the right resources while maintaining corporate policies, individual privacy and security. This mitigates risk of cyber-sabotage while enabling effective e-business operations.

Integration Overview

With the PeopleSoft certified software integration, users can be provisioned into PeopleSoft 7.5 systems. The integration also allows the enRole workflow and audit capabilities to pre-validate identities being added to the PeopleSoft solution. This means the following:

- As a single point of administration, new users can be automatically added to PeopleSoft so they no longer have to wait to access their required applications.
- Conversely, when a user no longer requires access to a PeopleSoft application, their ID can be automatically de-provisioned (removed) from the system. This allows an added level of security, when there is an inactive user ID on the system.
- The enRole integration provides workflow and auditing capabilities. This is especially important in regulated industries where companies need to have immediate knowledge of who has access to what systems.

The enRole Agent for PeopleTools 7.55 uses the DataMover interface to add, modify, and delete users in a PeopleSoft environment. The enRole server has a customizable form that is used to collect user data that is then passed in an XML message—transported via an HTTPS session—to the enRole Agent. The agent then makes the appropriate changes on the PeopleSoft server.

Availability

PeopleTools 7.55 is available from PeopleSoft. Contact your local PeopleSoft sales representative or call 888 773 8277.

enRole 4.1 and the enRole 4 Agent for PeopleTools 7.55 is available from Access360. For more information, call 877 742 6400 or sales@access360.com.

Support

Access360 fully supports enRole 4.1 and the PeopleTools 7.55 integration.

Certification Environment

Hardware: There are no additional hardware requirements other than the supporting operating systems.

Software: PeopleSoft 7.5 HRMS, PeopleTools 7.55

Partner product: enRole 4.1.2 Server Build 4072, enRole 4 Agent for PeopleTools 7.55 Build 4.1.1002

Database platform: MS SQL Server 7.0

Operating system: Windows NT4.0 and Win2000

PeopleSoft Certified Software Integrations

When PeopleSoft conducts certification testing, we verify only that the software integration functions according to the partner's test plan, and that it makes appropriate use of PeopleSoft components and integration technologies in the environment specified in the published

Certification Datasheet. Certification applies only to the components providing integration between the partner's software and PeopleSoft software; it does not apply to or extend to the partner's software product(s). Certification is performed in a lab environment using uncustomized versions of PeopleSoft and the partner's software. Certification testing is product version specific, hardware specific, database specific, and operating system specific, and is conducted in English, unless explicitly noted otherwise. Similar results may not be able to be duplicated in a production environment, including where the PeopleSoft or partner software is modified or customized upon implementation. Customers are solely responsible for the selection of all third-party software, including any integration software, used in conjunction with PeopleSoft software and for the results of such use. For the functional and environmental details on a certified integration, refer to the partner's Certification Datasheet, found in the Alliances section of the PeopleSoft web site at www.peoplesoft.com.
