

Kintana Accelerator for PeopleSoft

A PeopleSoft 7.5 certified software integration.

Automates the processes to implement and evolve business applications.

Provides realtime visibility and control over technical operations.

Kintana's product suite addresses common business challenges—such as time to market, system stability, and total cost of ownership. In addition to the Kintana Suite, Kintana provides a set of accelerators that have built-in knowledge of your complex business applications and can uniformly manage any heterogeneous environment.

The Kintana Accelerator for PeopleSoft, using in-depth knowledge of the application's intricacies, has been specifically designed to deliver value to PeopleSoft users. PeopleSoft's Partner Integration Team has formally certified the Accelerator's out-of-the-box integration, its extension of the application's existing capabilities, and its delivery of added value.

Kintana Software

Winner of two prestigious Crossroads A-List Awards, Kintana products yield dramatic savings of time and money for its customers, powering businesses by automating the processes that implement new business applications and evolve existing enterprise systems. Kintana gives its customers realtime visibility and control over their technology operations, enabling them to leverage their technology investments, deliver new initiatives much faster at lower cost, and increase productivity through enhanced collaboration. Founded in 1995 as Chain Link Technologies, Kintana currently serves more than 240 customers, including Cisco, GE, and Credit Suisse.

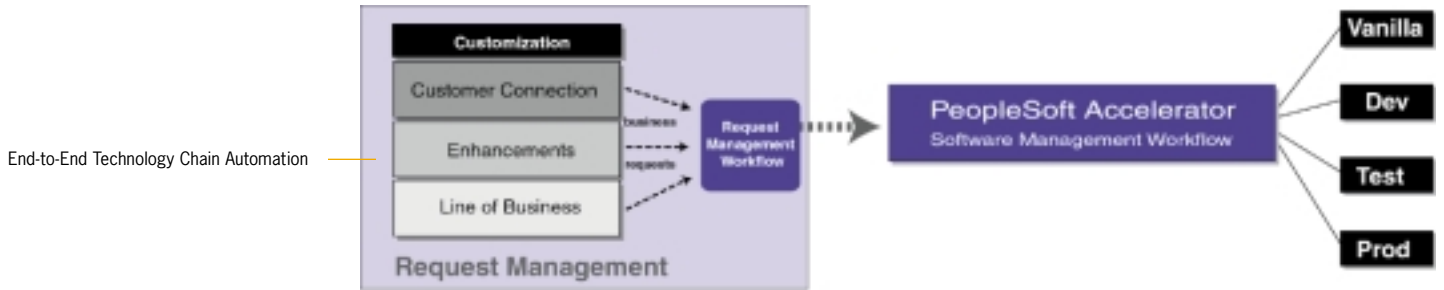

Integration Overview

Kintana is the leader in eBusiness infrastructure solutions. From capturing upgrade and enhancement requests to automating code deployment in your production systems, Kintana products provide unequaled, end-to-end technology chain automation with full audit capabilities. They speed up the technology of business. With this certified software integration to PeopleSoft, our joint customers can leverage the full power of an integrated, end-to-end process for managing all your business processes and aligning them to your information systems.

Kintana Accelerator for PeopleSoft Overview

Personalized applications are key in today's one-to-one business environment. Because PeopleSoft applications are superior in their ease of customization, modifications and extensions are frequent. Kintana's solution makes it easy to maximize this capability.

Not only does the Accelerator for PeopleSoft provide infrastructure to harness the full synergy of your organization, it streamlines efficiency and provides a complete audit trail for all changes made to your applications. It also manages the deployment of PeopleSoft objects such as SQR, COBOL, Data Mover scripts, Application Designer projects, Application Designer objects, and SQL scripts, resulting in accountability and a productive, stable PeopleSoft environment.

Kintana PeopleSoft 7.5 Certified Software Integration

An easy-to-use Java interface captures requests of all types including requests for enhancements, customizations, Customer Connection updates, and software bugs. The Request Management workflow drives them through the appropriate process for analysis, resolution, approval, justification, and prioritization. Then, if a software change is necessary, the request will automatically generate a change request to which software components can be added for deployment. The Deployment Management workflow drives these change requests through appropriate steps such as technical walkthroughs, approvals, and deployment to environments. Email notifications triggered at different workflow steps keep everyone informed as appropriate.

Integration with PeopleTools

The Kintana Accelerator for PeopleSoft enables you to streamline the migration and deployment processes of your PeopleSoft application. By combining the built-in API functionality of PeopleTools and with an automated file migration utility, the Accelerator enables true software provisioning between environments. The system can export Application Designer projects and database objects between databases without human intervention. Post-migration activities such as program compilations and database script execution are also system driven.

Accelerate Application Updates and Fixes

Applying Customer Connection updates and fixes to your PeopleSoft system is simplified by the Kintana Accelerator for PeopleSoft, which leverages the patch application process, from download to implementation. PeopleSoft fixes are safely and easily deployed through all applicable environments. By using the object automation capabilities of the Accelerator with its configurable workflow engine, the fix application process becomes entirely manageable.

Availability

The Kintana Suite and the family of eCommerce and ERP Accelerators are available from Kintana, Inc. Call Kintana at 408 543 4400 or email info@kintana.com.

PeopleSoft solutions are available from PeopleSoft. Contact your PeopleSoft sales representative or call 1 888 773 8277.

Support

The Kintana Accelerator for PeopleSoft, PeopleSoft 7.5 integration is fully supported by Kintana Software, Inc.

Certification Environment

PeopleTools: 7.53, 7.57, 7.57.02, 7.59

Partner products: Kintana 2.65, 3.0, 3.1

Database platforms: MS SQL Server 7.0, Oracle 8.1.6.1

Operating systems: NT 4.0 Server SP5, Sun Solaris 2.6

Hardware: Toshiba Equium 7100D P2@400 with 256 Megabytes RAM

PeopleSoft Certified Software Integrations

When PeopleSoft conducts certification testing, we verify only that the software integration functions according to the partner's test plan, and that it makes appropriate use of PeopleSoft components and integration technologies in the environment specified in the published Certification Datasheet. Certification applies only to the components providing integration between the partner's software and PeopleSoft software; it does not apply to or extend to the partner's software product(s). Certification is performed in a lab environment using uncustomized versions of PeopleSoft and the partner's software. Certification testing is product version specific, hardware specific, database specific, and operating system specific, and is conducted in English, unless explicitly noted otherwise. Similar results may not be able to be duplicated in a production environment, including where the PeopleSoft or partner software is modified or customized upon implementation. Customers are solely responsible for the selection of all third-party software, including any integration software, used in conjunction with PeopleSoft software and for the results of such use. For the functional and environmental details on a certified integration, refer to the partner's Certification Datasheet, found in the Alliances section of the PeopleSoft web site at www.peoplesoft.com.
