

# DCSI, dba HighJump Software Asset Inventory for PeopleSoft

PeopleSoft 8 certified software integration.

Flexible and efficient asset inventories.

Seamless integration with PeopleSoft.

As your company continues to grow at a rapid pace, the need to effectively and accurately manage assets becomes increasingly important to the bottom line result. With this in mind, HighJump Software, in conjunction with PeopleSoft, developed an Asset Inventory for PeopleSoft solution that automates the process of taking asset inventories for assets tracked in the PeopleSoft Asset Management module.

### HighJump Software

HighJump Software, formerly Data Collection Systems has been helping businesses gain a competitive edge with bar code data collection and warehouse management systems for more than 17 years. Offering a full-system approach including software, hardware, training, services and support, HighJump Software provides you a single source solution. At HighJump Software we strive to form a business partnership with every customer. You'll receive the highest level of support, assuring you of complete system satisfaction.

### Asset Inventory for PeopleSoft Overview

With Asset Inventory for PeopleSoft, you can accurately and rapidly manage your asset inventory and asset maintenance activities. Running on a compact, user-friendly hand-held device, the application is easy to install, simple to use and maintain. This solution helps your company easily take inventory of assets, add assets to the system, move assets to new locations, and update information—all the while seamlessly integrating with your PeopleSoft system.

### HighJump Software's PeopleSoft 7.5 and 8 Certified Software Integration

The Asset Inventory application seamlessly integrates information captured during inventory processes with PeopleSoft's Asset Inventory tables. Asset Inventory pulls information from the PeopleSoft system to facilitate inventory and other asset maintenance activities. When the activities are finished, Asset Inventory passes the information back to the PeopleSoft system for processing.

### Integration with PeopleSoft Asset Management

Asset Inventory pulls asset information from the PeopleSoft system using a direct table interface. The data collection device makes a connection to PeopleSoft and pulls asset information to direct inventory, transfer, and attribute update activities. Following the collection of transactions on the data collection device, Asset Inventory passes collected information to PeopleSoft for processing. The upload connection occurs using direct table connection.

### Availability

Asset Inventory for PeopleSoft integrates with PeopleSoft 7.5 and PeopleSoft 8 and is generally available from HighJump Software. Call 952 947 4088 or visit our web site at [www.highjumpsoftware.com](http://www.highjumpsoftware.com).

**Partner product:** Asset Inventory for PeopleSoft 1.0

**Database platform:** Microsoft SQL Server 7.0 with service Pack 2

**Operating system:** NT4.0 with service pack 5

## PeopleSoft Certified Software Integrations

When PeopleSoft conducts certification testing, PeopleSoft tests only that the software integration functions according to the partner's test plan, and makes appropriate use of PeopleSoft components and integration technologies in the environment

specified in the published Certification Data Sheet. Certification applies only to the components providing integration between the partner's software and PeopleSoft software. Certification does not apply to or extend to the partner's software product(s). Certification is performed in a lab environment using uncustomized versions of PeopleSoft and the partner's software. Certification testing is product version specific, hardware specific, database specific, and operating system specific, and is conducted in English, unless specifically noted otherwise. Similar results may not be able to be duplicated in a production environment, including where the PeopleSoft or partner software is modified or customized upon implementation. Customers are solely responsible for the selection of all third party software, including any integration software, used in conjunction with PeopleSoft software and for the results of such use. For the functional and environmental details on a certified integration, refer to the partner's Certification Data Sheet, found in the Alliances section of the [www.peoplesoft.com](http://www.peoplesoft.com) Web site.
